# Software App for Managing Connected Devices. AgriTech

euristiq + FieldBee

Discovery | Web development | IoT | QA/QC testing | Integration services | Cloud migration | Legacy modernization

FieldBee, an innovative precision farming company, aiming to create precision agriculture solutions that are reliable, super accurate, and affordable for every farmer. They came to us with a need to perform seamless software modernization of an outdated system with thousands of existing users and tens of thousands of farming sensors and devices. Considering the complexity of the project, we've decided to start with the project discovery service.

TECHNOLOGY STACK

Java | Hibernate | Spring Framework | Angular | DDD | CQRS

AWS SERVICES

Amazon Database Migration Service | Amazon IoT Core | Amazon Server Migration Service | Amazon CloudFront | Amazon CloudTrail

OUTCOMES

- Seamless modernization of a farming app that already manages thousands of devices
- New architecture that will save up to 20% of operational costs for end-users of the software
- IoT enabled thanks to AWS cloud migration
- Fully working guidance system for tractors to make automated farming available for farmers of all sizes
