Vendor Management System. Beeline Professional

euristiq + beeline

Back-end development | Integration services | DevOps | QA testing | Architecture

Our customer's product is a vendor management system (VMS) for managing the extended workforce. Companies use it to track external vendors, staffing suppliers, consultants, and remote teams. This web app centralizes the management of staffing suppliers and contingent labor.

Euristiq engineers have been integrated into the customer's team for the last three years to help develop and evolve crucial components of the "Beeline Professional" vendor management system, i.e. time and expense tracking functionalities.

TECHNOLOGY STACK

Kotlin | Spring | PostgreSQL | Kafka | Redis | Kubernetes | ActiveMQ

AWS SERVICES

Amazon RDS | Amazon EKS

OUTCOMES

- Backend development of system's critical components – time and expense tracking functionalities
- DevOps services based on AWS
- Simplified monitoring of contractor hours, billing, and business trip expenses
- Customizable automated processes, including timesheets approvals
- 97% fewer manual errors due to better data integrity
