Telematics Fleet Management Platform. Cubit Insurance

euristiq + CUBIT INSURANCE

Discovery | Web development | UI/UX design | IoT | Architecture | SaaS deployment | QA/QC testing

An insurance company from London requested cloud-based IoT solution that uses video telematics data from cameras. Euristiq began with the project discovery and performed platform development of the telematics service on AWS from scratch.

The new platform utilizes video telematics data to monitor and analyze driver's behaviour, identifies early signs of risky driving, and provides full automation for flexible business insurance packaging for transportation and logistics companies.

TECHNOLOGY STACK

Java | PostgreSQL | HTML/CSS | Angular | DDD | JavaScript | Google Maps

AWS SERVICES

RDS Aurora | AWS Lambda | Cognito | CloudFront | ECS Fargate | AWS Kinesis Data Streams | DynamoDB | AWS Kinesis Flink Application | SQS | S3 | ELB | CloudFormation | AWS Transfer Family | API Gateway | SES

OUTCOMES

- Discovery phase that resulted in 50% reduced time of development and cost
- AWS-powered IoT platform that integrates video telematics to provide real-time accident capture and analysis
- Driver behaviour monitoring functionality for safer driving
- Full automation for flexible business insurance packaging for transportation and logistics companies
