Smart City Lighting Solution. Lumintell by Novalume

euristiq + NOVALUME

Web development | UX/UI design | IoT | Architecture | QA/QC testing | SaaS deployment | Legacy modernization | Integration services

A Danish company, Novalume, engaged Euristiq for the legacy modernization and redesign of a complex smart city lighting solution that can handle 2 million connected devices worldwide.

During our collaboration, we built Lumintell, a plug-and-play solution consisting of two separate platforms for city officials and lighting operators, as well as an Android application for field workers.

TECHNOLOGY STACK

ASP.NET | Azure | Azure SQL | MongoDB | Kubernetes | Event Hubs | RabbitMQ | SignalR | Angular.js | StructureMap | HTML/CSS/JavaScript

OUTCOMES

- Scalable Azure-based architecture supporting 2M connected streetlights, ensuring high availability
- Real-time monitoring & reporting cutting maintenance costs by 50%
- Event-driven data processing with RabbitMQ and Event Hubs enabling real-time synchronization of lighting metrics
- Android field service app for wireless installation & diagnostics
- Automated dimming and scheduling features reducing energy use by 75%
