Multi-tenant Wealth Management Platform

euristiq + mozaiik

Web development | Cloud architecture & DevOps | Multi-tenant platform engineering | AI-native development | QA | Project management

We helped our client create the first Canadian-native wealth management platform purpose-built for investment counsel firms and multi-family offices. The platform gives advisors a single, consolidated view of complex high-net-worth family wealth across every entity type, asset class, and planning dimension, replacing spreadsheets and US-built tools that were never designed for how Canadian private wealth actually works.

TECHNOLOGY STACK

AWS | React | TypeScript | ASP.NET Core | PostgreSQL | GitHub Actions | Docker

OUTCOMES

- First Canadian-native wealth management platform built entity-first, purpose-built for IC firms and multi-family offices
- Over 40% in development costs saved through AI-native delivery
- $150K+ in annual savings for firms switching from US-built platforms
- SOC 2-aligned architecture built in from day one
