# Investment Portfolio Management Software by Octopus Investments

euristiq + octopus

Front-end/back-end development | Architecture | QA/QC testing | Legacy modernization | Integration services | UX/UI design

Clients engaged Euristiq to build  a modern investment portfolio management platform to replace an outdated system. The solution automates data collection, reducing human error and improving operational efficiency.

It enables seamless management of funds, withdrawals, and investor profiles while supporting over 63,000 users and £12.9 billion in assets. A user-friendly interface enhances tracking, payment processing, and investor validation.

TECHNOLOGY STACK

ASP.NET MVC | SQL | HTML/CSS/Bootstrap | JavaScript/TypeScript | .NET Core | Entity Framework Core | Kafka | Sentry | RabbitMQ | Azure Blob Storage | Azure WebJob | Angular 6/7/8 | RxJs | Node

OUTCOMES

- Legacy System Modernization. Upgraded an outdated app for efficient investment management
- Intelligent Automation. Reduced human error by automating data collection from multiple sources
- Scalable User Management. Supported 63K+ investors and £12.9B in managed funds
- User-Friendly Interface. Improved UI/UX for better tracking, payments, and validation
