Cloud-based Document Management Software for Octopus Investments

euristiq + octopus

Front-end/back-end development | Architecture | QA/QC testing | Legacy modernization | Integration services

Octopus Investments engaged Euristiq to build an automated document management and cloud storage solution. The solution aggregates data from multiple sources, eliminating manual work and improving efficiency.

A high-concurrency server architecture ensures seamless performance, while robust security measures protect sensitive financial data. The system significantly reduces operational costs, saving the client £400k annually.

TECHNOLOGY STACK

.NET Core | WEB.API | SQL | Microsoft Azure | Fluid.Core | WeasyPrint | Dapper | Sentry | RabbitMQ | Kafka | Hangfire | VSTS | Docker | RxJs

OUTCOMES

- Automated Document Generation. Eliminated manual creation by aggregating data from multiple sources
- Cloud Migration. Improved scalability, security, and accessibility
- High-Concurrency Architecture. Ensured efficient handling of simultaneous operations
- Enhanced Data Security. Strengthened protection of sensitive financial data
- Cost Savings. Reduced expenses by £400k annually through automation
