Street Light Management. Mobile Application

euristiq + PHILIPS

UI/UX design | Mobile development | QA/QC testing | Architecture

Philips Electronics approached Euristiq with a vision for a smart city software solution centered around smart street light management to utilize their special street light LED hue bulbs. Within 6 month we've delivered an MVP of an intelligent, adaptive street lighting control system. This system is complemented by an easy-to-operate mobile app where users can adjust light levels, set schedules, and remotely change light colors.

TECHNOLOGY STACK

Java/Kotlin | Google Firebase | Google Guice | Quartz | Raspberry PI | Android

OUTCOMES

- An innovative IoT system built around the client's energy-efficient LED street light bulbs
- New UX/UI for mobile application with custom dashboards
- A mobile app for easy maintenance and creating lighting schedules
- Lets reduce CO_2 emissions and lower energy usage and costs by up to 70%
- MVP developed in just 2 months
