Redesigning the Advanced Energy Intelligence Platform

euristiq + RODAN SYGRATION+

Application development | API integration | Application maintenance | Security hardening

Our client is a leading North American energy management company. One of their products, MarketIQ™, required redesign and modernization, for which they turned to Euristiq for software development consultation and assistance.

Euristiq engineers designed and developed the energy intelligence platform that is a single source for the full spectrum of electricity market data. It is highly beneficial for Canadian large energy consumers and power generators.

TECHNOLOGY STACK

Python | Django | Rest framework | Vue3 | Composition API | TypeScript | Vuetify | MySQL 8 | Highcharts-Vue Library | Vue-Router

OUTCOMES

- Dynamic all-in-one platform that transforms energy market data into actionable insights
- Development of responsive and user-friendly dashboards, reports and widgets
- Platform handles incoming energy data amounting to 30,000 unique data points daily
- Improved the average page load time from 13.31 seconds to 3.14 seconds
- Expanded cache volume from 300 to 1M entries (data points)
