Integrated Flight Operations Software

euristiq + RYANAIR

Web development | Architecture | Micro-services | SaaS deployment | Integration services

Ryanair required flight planning software to enhance its flight management. We helped develop a comprehensive operations control system (ROCS) and integrate critical components for business process management, including crew management and flight scheduling. The new software provides a more reliable, automated, and optimized approach to managing flights and crew, reinforcing the airline's operational stability and scalability.

TECHNOLOGY STACK

.NET | Microsoft Azure | Spring Framework | DDD | CQRS | TDD | NServiceBus | Entity Framework Code First

AWS SERVICES

Amazon RDS | SNS | CloudWatch | EC2 | SQS | ELB | ELB | Lambda | LS3 | CloudFormation

OUTCOMES

- Migrated the entire project infrastructure from Azure to AWS
- Seamless integration with existing airline systems
- Developed an advanced algorithm to optimize crew duty assignments
- Scalable, fault-tolerant system capable of handling spiky loads
- Flight operating system is now being rolled out across Ryanair's subsidiary airlines
