Urban Planning Software Modernization

euristiq + SITOWISE

Application development | API integration | Application maintenance | Security hardening

The client approached us to modernize and secure their software due to challenges with legacy systems and outdated frameworks that impacted scalability, performance, and security. The primary goal was to maintain and enhance these applications, focusing on improved performance, fortified security, and an enhanced user experience.

With legacy systems and outdated frameworks posing challenges to scalability and security, the project also aimed to modernize the technology stack align the platform with industry standards, and ensure the seamless integration of emerging technologies for sustained growth.

TECHNOLOGY STACK

Java 7 | Java 8 | GWT (Google Web Toolkit) | Hibernate | Maven | PostgreSQL | WildFly | SQL Server Reporting Services | Git | Flyway

OUTCOMES

- 97% fewer manual errors due to better data integrity
- Upgraded legacy libraries to modern, secure standards
- Improved the app's performance and scalability
- Added APIs to connect with external systems and expand features
- Ensured smooth data flow between frontend and backend for real-time updates
