IoT-based Smart Office Solution for Tektelic

euristiq + TEKTELIC

Architecture engineering | Front-end/back-end development | UI/UX design | QA

Tektelic approached Eurisiq with a problem of meeting room underutilization. They engaged us to develop fully integrated, end-to-end, IoT smart office app for their LoRaWANTM IoT gateways and sensors.

Thanks to this solution, office workers can track the occupancy of each meeting room, and office managers can receive extensive meeting room efficiency statistics.

TECHNOLOGY STACK

Java | Angular | Spring Framework | JHipster | AWS | PostgreSQL | Liquibase | Apache Maven | Microservice architecture | JavaScript | TypeScript

OUTCOMES

- IoT solution with a user-friendly dashboard displays real-time occupancy status
- Integration with IoT gateways and sensors
- Synchronization with Outlook and Google Calendars
- Developed a reusable core code for further applications integrated with the client's devices
- A fully working smart office solution has entered volume production in just 6 months
