Construction Budgeting Software

euristiq + VAMEST

Discovery | Web development | Architecture | Integration services | Front-end/back-end | QA testing

The client is a startup from the USA that came to Euristiq with the concept of pre-construction budgeting and forecasting software that enables efficient cost management.

After four months of development, the Euristiq team introduced fully working application with integrated payment system, dynamic dashboards and budget predictions.

TECHNOLOGY STACK

Java | Hibernate | Spring Framework | DDD | CQRS | Stripe | HTML/CSS/TypeScript | Angular

AWS SERVICES

AWS Fargate | AWS Cognito | Amazon RDS | AWS CodePipeline / CodeBuild / CodeDeploy | AWS CloudFront | AWS CloudFormation

OUTCOMES

- Construction budgeting software with an integrated payment system Stripe for secure subscription-based access
- Web app on AWS with a dynamic dashboard for budget predictions
- Seamless access to multiple projects under a single login
- Market-ready solution from scratch in just 4 months
