Student Information System Modernization for York University

euristiq + YORK

Discovery | UI/UX design | Architecture | Cloud migration | Integration services

York University, Canada's third-largest university with 55,000+ students, struggled with 60+ legacy modules built over 30 years that managed student data, enrollment, and course offerings.

Euristiq conducted a comprehensive Discovery phase to map out a modernization strategy for York's system, aligned with modern educational needs.

TECHNOLOGY STACK

Java | React | React | React | React | React

AWS SERVICES

RDS | CloudFront | C++ | Python | Prolog | SQL (OracleDB)

OUTCOMES

- Discovery service assessing complex legacy infrastructure
- Systems architecture redesign for phased modernization with zero disruption to operations
- Modern technology stack recommendations reducing technical debt
- Accessibility-first design approach ensuring compliance and inclusive user experience
- Scalable migration roadmap enabling transition from desktop to web-based systems
