AI Assistant for SQL Database Interaction

Talk to Your Data is a conversational AI assistant that lets users query SQL databases in plain language. It translates questions into SQL, runs them securely, and visualizes the results — cutting response time to 4.5 seconds and making data accessible to technical and non-technical users alike.

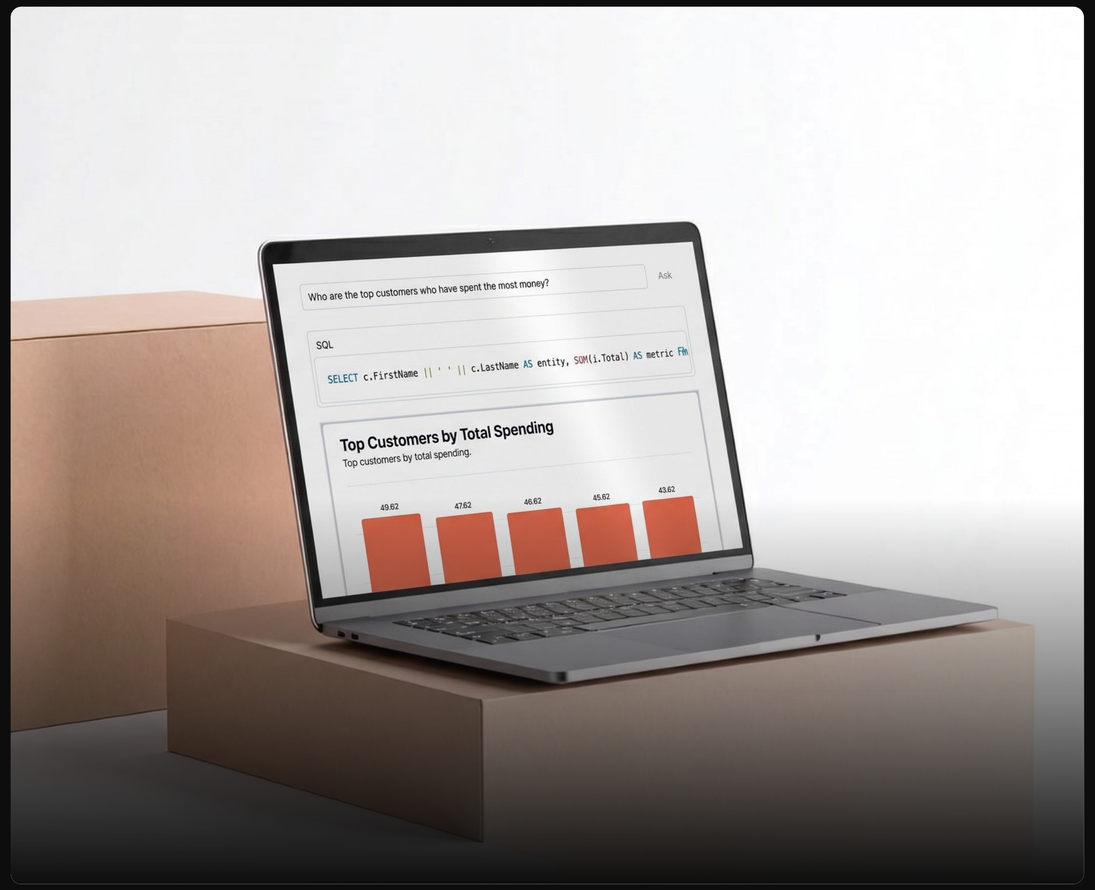

PoC | AI | Generative AI | AWS

Outcomes

4.5-second average query response
Down from roughly 50 seconds before optimization, achieved through optimized architecture and smart model selection.

Proof of concept in 3 weeks
From concept to a fully functional working system.

Natural language to SQL, with reasoning shown
An interactive, iterative reasoning loop translates plain-language questions into accurate SQL and explains its logic, which the team found outperforms traditional BI tools on flexibility and accuracy.

Average query response time (down from 50 sec)
4.5 sec

Weeks from concept to working PoC
3 weeks
