AI-Native Experience for the Largest Indian Non-Bank Lender

This AI-native design case study shows how Euristiq helped a leading Indian non-bank lender reimagine secured-loan origination — replacing a rigid, multi-step app flow with a voice-first, generative UI built on Google's Gemini Live API, designed for the specific requirements of the client's user base.

Discovery | AI-native design | AI voice assistant | Voice-first UX | Generative AI | Legacy modernization | Mobile | AI-native development

Outcomes

POC in ~6–8 weeks
A working proof of concept where users could speak to the app and receive live, spoken responses.

Voice, video and text
Multimodal and multilingual by design, responding in whatever language the borrower speaks.

Generative UI, not fixed screens
The interface is generated live from the conversation instead of a static page structure.

Cross-sell built into the flow
Relevant offers (e.g. phone deals) surface naturally inside the loan conversation.
