AI-Powered Healthcare Staff Scheduling Software

Our client ran physician and staff scheduling by hand — one scheduler could cover 4–6 hospital sites, and growth demanded 12+. Euristiq built a custom AI healthcare staff scheduling software engine, validated by a working proof of concept in three days, that cut schedule construction from days to under an hour and tripled the capacity of every scheduler.

Outcomes

From days to 1 hour
Automated scheduling cut generation time by 90%.

4–6 → 12+ sites
3× more hospital sites per scheduler, with no added headcount.

60–80% less manual work
AI scheduling and automated audits reduced manual effort.

Caught pre-publish
Constraint violations detected before publication, preventing costly rework.
