Better Intelligence for Business Insurance

The client approached Euristiq for R&D digital consulting regarding a new business intelligence software tailored for insurance companies that cater to the transportation and logistics sectors. During the project discovery phase, we tackled numerous challenges. Among the most significant was validating the technical feasibility of creating the solution and estimating the overall development cost.

Discovery | IoT | AWS | MVP | Custom software development

Outcomes

- **Performed a project discovery for an insurance company building business intelligence software for the transportation and logistics industry**
- **Offered customizable business process automation software for insurance companies**
- **Developed technical requirements and project roadmap for a platform that analyzes telemetrics data**
- **Detailed technical architecture with UI mockups and a feature-based cost and time evaluation**
