Bike Rental Software Development

A Danish e-bike rental provider approached Euristiq with an idea to develop a smart bike rental software solution with no analogs on the market. This system had to provide easy management of electric bicycles.

Custom software development | IoT | Data collection & processing | Real-time asset tracking

Outcomes

Delivered a scalable bike rental software system in just 3 months, supporting 200K+ users and over 1.5M trips in its first few months of operation.

Enabled real-time tracking and management of bike fleets across multiple cities, providing users with accurate bike availability and location visualization.

Integrated an onboard tablet with GPS for each bike, allowing users to plan routes and manage bookings while enabling operators to monitor fleet status in real time.

Ensured secure, intuitive payments through integration with Altapay, offering seamless transactions and cash flow tracking tools for administrators.

Industry	Location	Numbers
Transportation	Europe	2M trips | 200K+ users
