Custom Utility Monitoring System

A Denmark-based engineering consulting group partnered with Euristiq to develop an IoT-based utility monitoring system (UMS) for asset management. The platform automatically collects and analyzes utility network data, presenting insights as KPIs aligned with Danish Water Association and Ministry of Environment standards.

IoT | Legacy modernization | Data collection & processing

Outcomes

Faster troubleshooting and lower costs
The custom utility monitoring system tracks network conditions, prioritizes maintenance, and provides visibility into supply processes, helping utility companies save time and costs.

10x less time
Time decreased for troubleshooting and problem resolution.

15% less costs
Overall operational costs reduction after digital transformation.

IoT-based UMS
Fully-working smart utility monitoring and management platform, which (combined with other client products) helps reduce high water loss in Oslo, Norway.
