Digital Twin for Warehouse Monitoring

Our client is a company that provides IoT hardware and software solutions. As an IoT development company, we have built for this client two web applications that work as an intelligent warehouse monitoring system, providing analytics, and real-time alerts from a large number of sensors located in different sites.

Custom software development | IoT | Real-time asset tracking

Outcomes

Co-created a complex but easy-to-scale IoT tracking system for warehouse management with a simple intuitive interface

Real-time utility monitoring system that improves fault detection and in-house security

Digital product allows enterprise customers to significantly save costs on resource consumption

A complex real-time utility monitoring system for managing warehouses across the globe.
