In-Store Customer Tracking System

The client is the world’s leading health and beauty retail group with over 15,000 stores across the globe. We offered digital consulting services and developed a low-cost in-store customer tracking system that improves customer experience and optimizes employees’ routines. The MVP of this product provides insights into the most popular sections of a store, monitors the number of customers at the checkout, and tracks areas where employees spend the majority of their time.

IoT | Custom software development | Data collection & processing

Outcomes

Smart retail enabled
Real-time store visitors and employees routine tracking, with in-store activity reports and actionable insights.

MVP in 1 month
Created a production-ready app with profound data collection in 1 month.

15K stores
Scalable low-cost in-store tracking system for 15,000+ stores across the globe.
