KYC Verification Integration

A confidential Canadian digital identity platform needed real-time, auditable identity checks to counter synthetic identities, AI-generated documents, and rising fraud. Euristiq built a full Onfido (now Entrust) integration with zero downtime, running alongside live product development.

Custom software development | AWS | Digital identity verification | Integration services

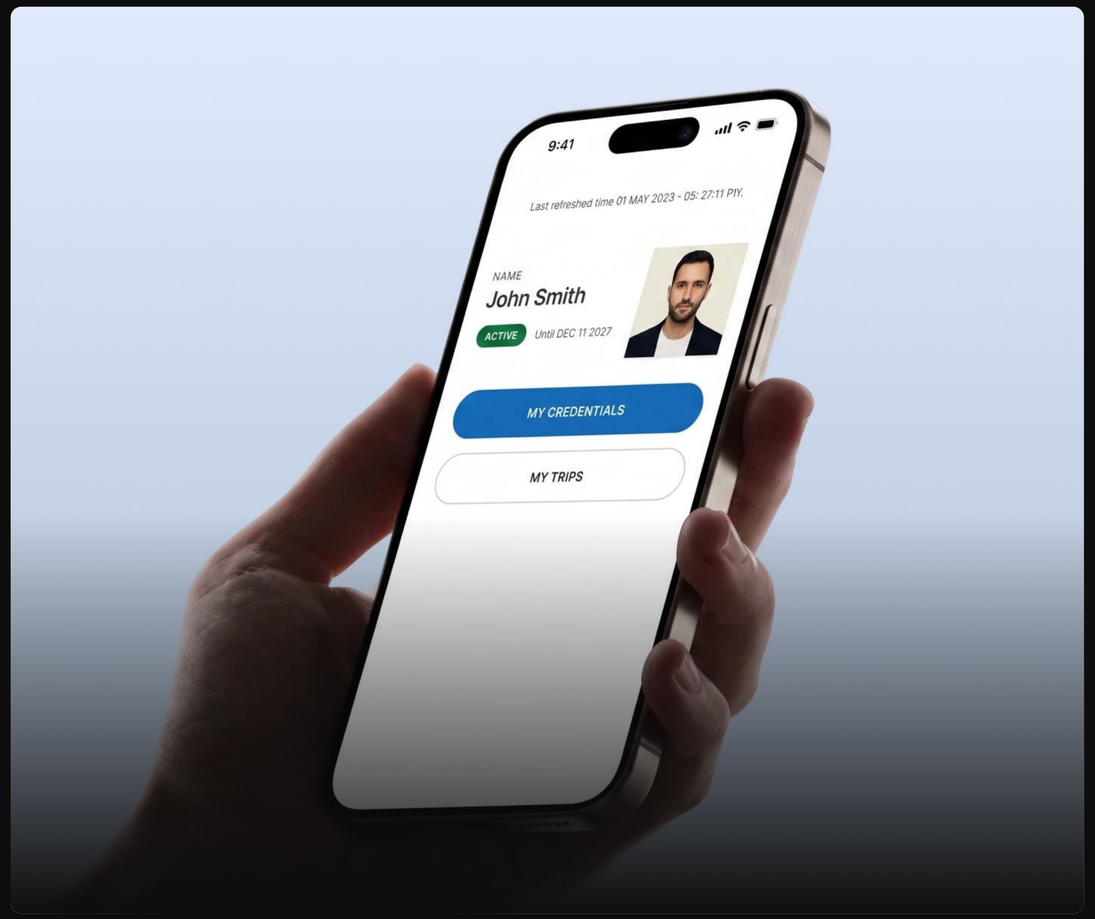

Outcomes

Zero-downtime integration
Built over six months alongside live development, with no service interruptions.

Real-time verification
Users verify identity in seconds on web, iOS, or Android.

2,500+ document types
Multi-jurisdiction document support with no manual-review bottlenecks.

2-year partnership and growing
Expanded provider support and added mobile SDK capability over time.
