Next-Gen Document Verification Service

Euristiq collaborated with a leading digital ID and authentication provider to co-create a cutting-edge cloud service that securely processes and verifies personal information in real-time. This innovative solution streamlines consumer access to online services and applications, providing a trusted and convenient digital identity verification experience.

Custom software development | DevOps | Mobile | Integration services | Cloud infrastructure & development | AWS

Outcomes

- **Adopted by the US and Canadian governments, Canadian interbank network, financial institutions, and businesses**
- **Enables users to verify identity via government-issued photo ID scan or online banking login credentials**
- **Ensures high privacy protection with no exchange of personal information with the government or the bank**
- **Supports multiple databases, enterprise integrations, and fraud detection systems**
