Remote IoT Device Management Platform

The client, an IoT product and engineering services company, engaged Euristiq to build a custom IoT device management platform. The solution enables remote device management, seamless device communication, and the development of custom applications on top of the platform.

Discovery | Custom software development | IoT | AWS | Cloud infrastructure & development | Data collection & processing

Outcomes

- **Business analytics and requirements elicitation**
- **UX/UI and architecture design**
- **AWS-powered IoT platform development**
- **Data gathering and analytics**
