Self-Service Advertising Platform

The client is Europe’s largest airline company, offering a range of services such as ticket purchasing, hotel room booking, car rentals, and more. They approached Euristiq with an idea to develop a self-service advertising platform, utilizing our platform development services, to create a unique product with no analogs on the market. We developed both the front-end and back-end of this advertising platform, enabling advertisers to run highly targeted campaigns and bid on primary spaces on passenger boarding passes.

Custom software development | MVP | AWS | Data collection & processing

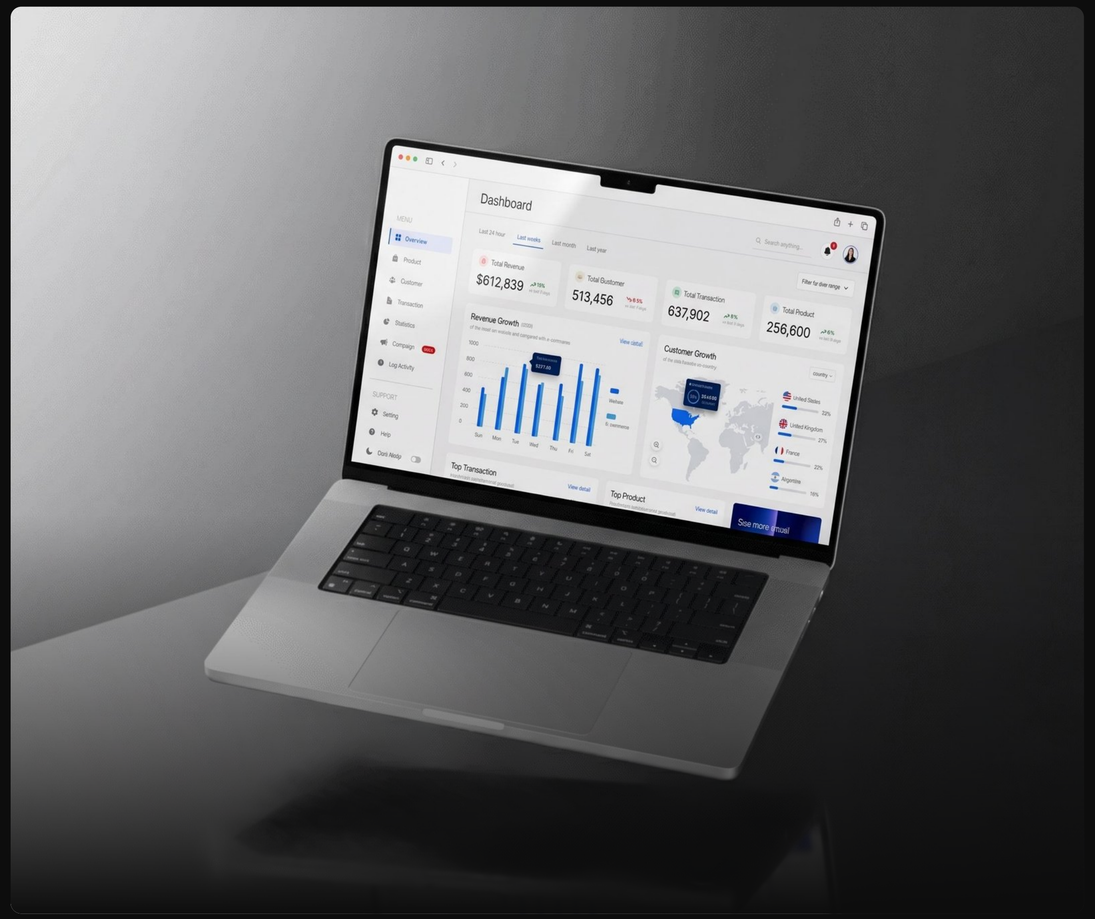

Outcomes

Built a self-service ad platform for real-time bidding on boarding pass space, opening a new revenue stream for a leading airline.

Implemented an ad ranking algorithm to optimize campaign performance and target passengers with relevant ads.

Created a fast, intuitive campaign management system for quick setup, monitoring, and multi-campaign support.

Seamlessly integrated with the airline’s AWS infrastructure, boosting flexibility, autonomy, and ROI with targeted ads.
