Sports Equipment Inventory Software

Our client, an engineering company producing equipment and sensors for various markets, including sports, fitness, and wellness, recognized the growing value of sensors integrated into sports equipment for business owners. These sensors empower them to not only double the productivity of each piece but also extend its lifecycle. This realization led our client to create an innovative fitness business software aimed at remotely managing sports equipment efficiency.

Custom software development | IoT | AWS | Data collection & processing | Real-time asset tracking | Cloud infrastructure & development

Outcomes

- **Built a cloud platform with IoT sensors for remote equipment management and real-time monitoring across multiple locations.**
- **Enabled predictive maintenance to help gyms cut costs and boost revenue.**
- **Created custom dashboards for equipment usage insights, supporting data-driven decisions.**
- **Ensured data security and scalability using AWS Fargate.**
