Telematics Fleet Management Software

A London-based fleet insurance company recognized that non-visual telematics data was insufficient for comprehensive risk analysis. Euristiq leveraged its cloud development expertise to build a video-based fleet management solution that optimizes insurance policies and enhances driver monitoring and coaching.

Discovery | MVP | IoT | AWS | Custom software development | Data collection & processing | Real-time asset tracking

Outcomes

- **Project started with discovery that resulted in 50% reduced time of development and cost**
- **AWS-powered IoT platform that integrates video telematics to provide real-time accident capture and analysis**
- **Full automation for flexible business insurance packaging for transportation and logistics companies**
- **Driver behaviour monitoring functionality for safer driving**
