Business Travel Management App

Finch needed a development partner, not just a vendor, to take its business travel app from early idea to a product teams would use. Two embedded Euristiq engineers helped ship Finch.travel through an Alpha → Beta → MVP cycle in under a year, onboarding its first five corporate clients.

Discovery | MVP | UX/UI design | Custom software development | Travel expense management | AWS | Cloud infrastructure & development

Outcomes

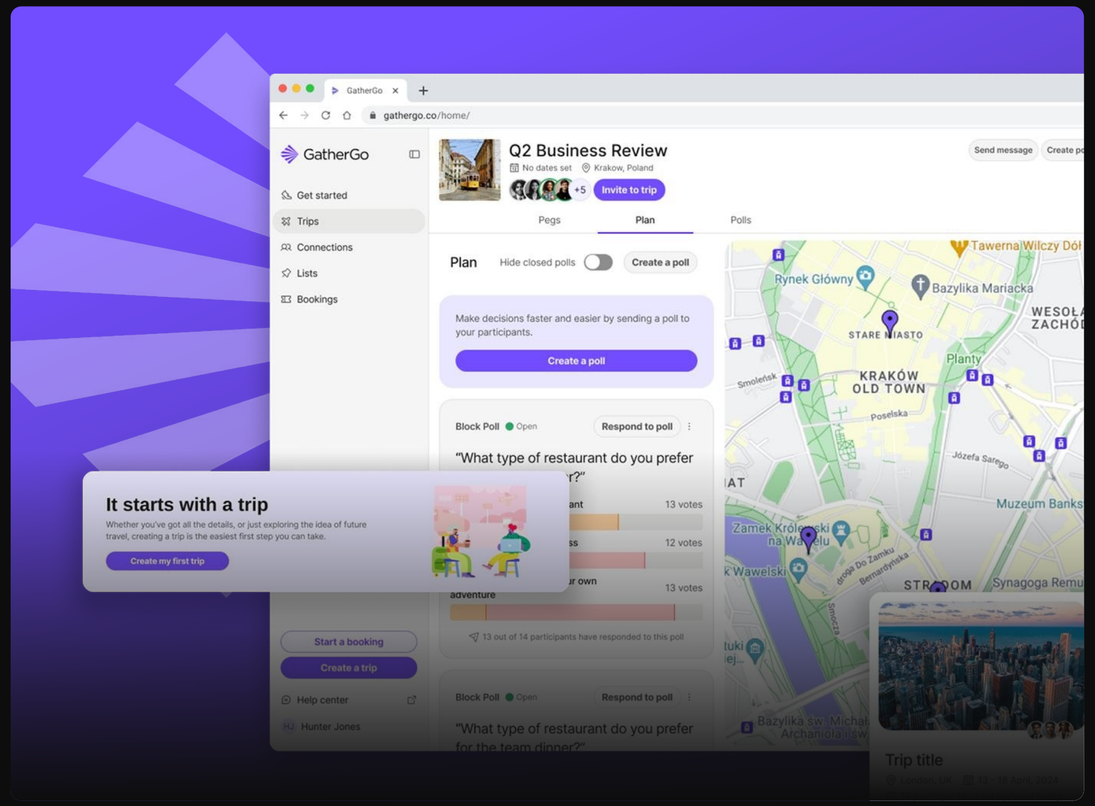

MVP in under 1 year
Shipped through an iterative Alpha → Beta → MVP build cycle.

5 corporate clients onboarded
Early product-market fit reached during the MVP stage.

Fewer expense errors
Automated expense tracking and categorization removed manual reporting mistakes.

Secure-by-default architecture
AWS Cognito authentication and Secrets Manager credential handling, built to scale.
