Industrial Asset Management Software

Before launching its industrial asset management software, IRISS needed to confirm the platform was scalable, secure, and ISO 27001-ready. Euristiq ran a full pre-launch audit covering architecture, security, and UX/UI — surfacing fixes that would otherwise have taken up to 12 months to unwind after launch.

Platform audit | Legacy modernization | IoT | Compliance-ready software

Outcomes

12 months of rework avoided
Critical bugs caught and fixed before launch, not after.

WCAG AA accessibility
The platform was brought up to WCAG Level AA before launch.

5% less wasted infrastructure
Cost-plan review identified and cut wasted infrastructure spend.

1M+ devices monitored
E-Sentry, the resulting product, now monitors over 1 million connected devices.

IRISS

Domain	Location	Platform's capability
Manufacturing	USA	1 million connected devices
