Altimeter App Development

L&B Altimeters makes altimeters used by skydivers in more than 50 countries. Euristiq built JumpTrack, the companion app — native Android and iOS apps, Bluetooth Low Energy hardware integration, and a serverless AWS backend designed to work without a phone signal.

Custom software development | IoT | Mobile | Data collection & processing | Real-time asset tracking

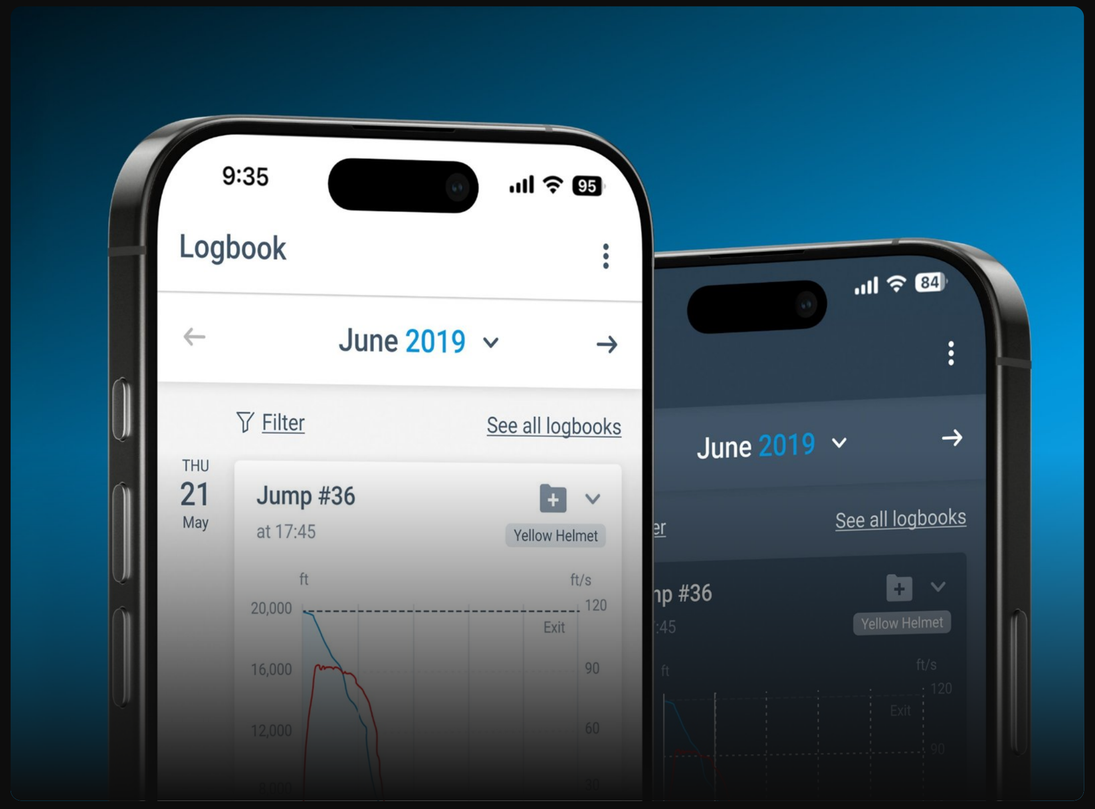

Outcomes

100K+ units supported
JumpTrack connects to altimeters sold worldwide, used in 50+ countries.

Works with zero signal
Jump data is stored locally over BLE and synced once connectivity returns.

±20 ft precision respected
The app's design holds to the hardware's altitude precision requirement.

Partnership extended past launch
Euristiq keeps adapting the apps as L&B ships new hardware versions.
