Physician Scheduling Software Modernization: Two Platforms, One Plan

Our client, a Canadian healthcare IT company, was stuck between a legacy system of record and a half-finished replacement — with manual releases and thin monitoring underneath both. Euristiq ran an 8-week legacy software audit and delivered a physician scheduling software modernization roadmap that let them consolidate in stages, in production, without betting the company on a rewrite.

Legacy modernization | Platform consolidation | Well-Architected review | AWS | Multi-tenant SaaS | Cloud infrastructure & development | AI-native development

Outcomes

8-week audit
An independent audit of the legacy product foundation — platforms, architecture, operations.

3 executive-ready documents
Assessment, options, and solution design aligned into one plan.

3 paths, 9 criteria
Three platform strategies evaluated against nine business and technical criteria.

1 prioritized risk register
Every technical constraint linked to its business impact and urgency rather than listed flat.

MetricAid+

Industry	Location	Platform's capability
Healthcare	Canada	17,000+ users across hospital departments
