Digital Identity Verification Service

Euristiq built Midy by Norton — a secure, privacy-first digital identity verification platform for Gen Digital (Norton). 100% PII protection, 18+ microservices migrated to Kafka, serving 500 million users across 150 countries.

Custom software development | Mobile | Multiple KYC integration | PII protection service | DevOps | AWS | Cloud infrastructure & development

Outcomes

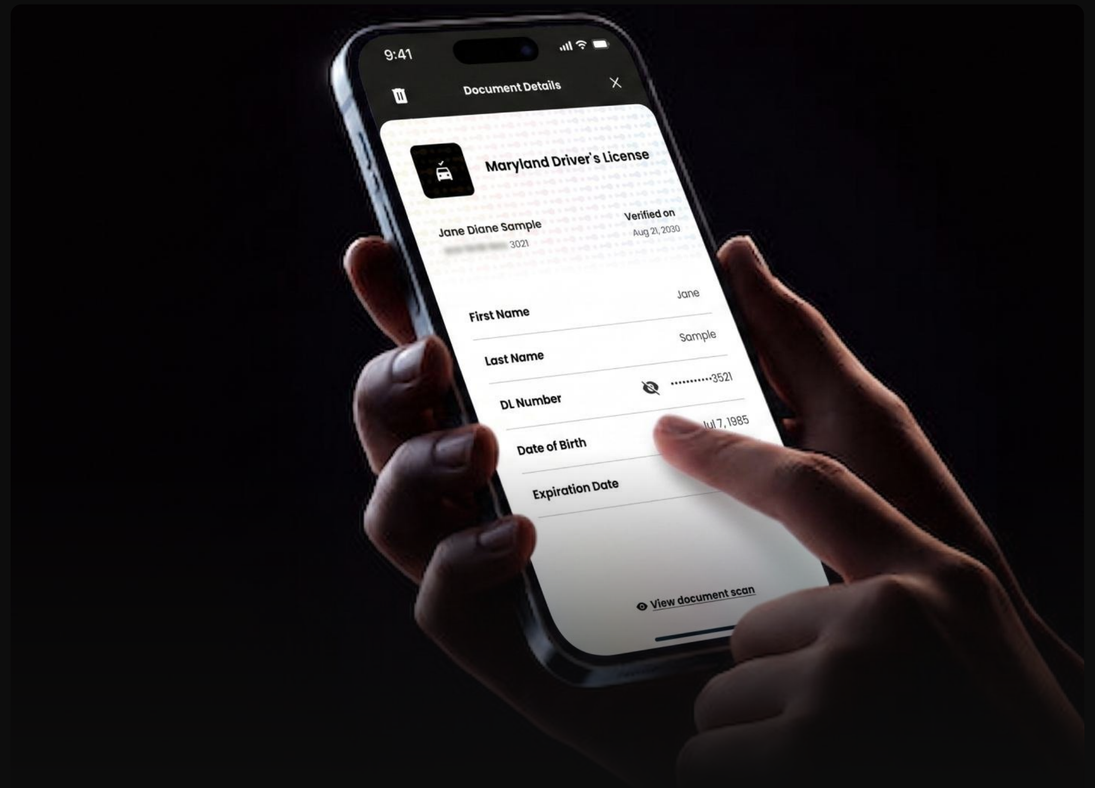

100% PII protection
No identity data is stored without user consent; verification data is deleted immediately after processing — success or failure

18+ microservices migrated
Moved from Amazon SQS to Kafka, boosting asynchronous event throughput + platform scalability

3 OCR providers evaluated
Golang PoC benchmarked providers for accuracy and performance

Configurable checks
Configurable verification checks via API — no code or infrastructure changes

norton

Domain	Location	Platform's capability
Fintech	Canada	500M users served globally
