# Illuminating Success with New Firmware

Danish company Novalume partnered with Euristiq to enhance its smart IoT lighting system by upgrading legacy lamp-control firmware and integrating new hardware modules. We developed an intelligent control and maintenance system focused on performance, security, and scalability.

Legacy modernization | UX/UI design | IoT | Azure | Legacy modernization | Digital twin | Real-time asset tracking | Data collection & processing

## Outcomes

**OTA firmware updates at scale**
The modernized embedded system, comprising several hundred units in the mesh network, now supports over-the-air (OTA) firmware updates, lowering energy consumption during off-peak hours and minimizing maintenance expenses through real-time performance monitoring.

**60% increase**
Test coverage increased after successful software modernization.

**10% increase**
Zigbee network stability increased.

**2M units**
System now supports 2 million connected units.
