A “Plug and Play” Smart City Lighting Solution

Novalume needed its smart city lighting platform, Lumintell, to scale to millions of connected lamp units, handle high concurrency, and simplify field maintenance. Euristiq built the software behind it — two management platforms plus a field-crew app — on Azure.

Custom software development | UX/UI design | IoT | Azure | Legacy modernization | Digital twin | Real-time asset tracking | Data collection & processing

Outcomes

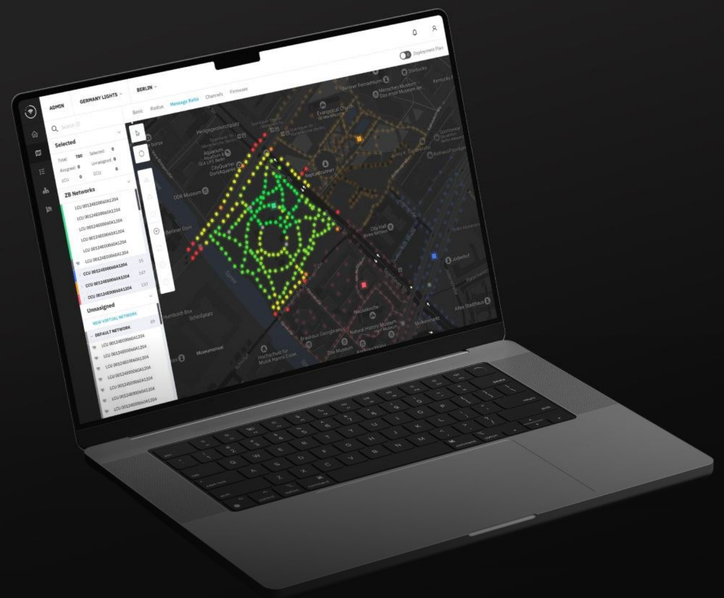

2M connected lamp units
The plug-and-play system now controls 2 million streetlights globally.

Up to 75% less energy use
When the software is paired with LED streetlights.

Up to 50% lower maintenance
From real-time monitoring and performance reporting.

Up to 30% lower CO_2
Enabled by the platform’s light-dimming capabilities.
