A Cloud-based Document Management System

In this document management system case study, we walk through how Euristiq engineers partnered with a London-based investment company to replace manual paperwork with a cloud-based document management system — and why that decision now saves the client an estimated £400K annually.

Legacy modernization | Azure | Process automation | Integration services

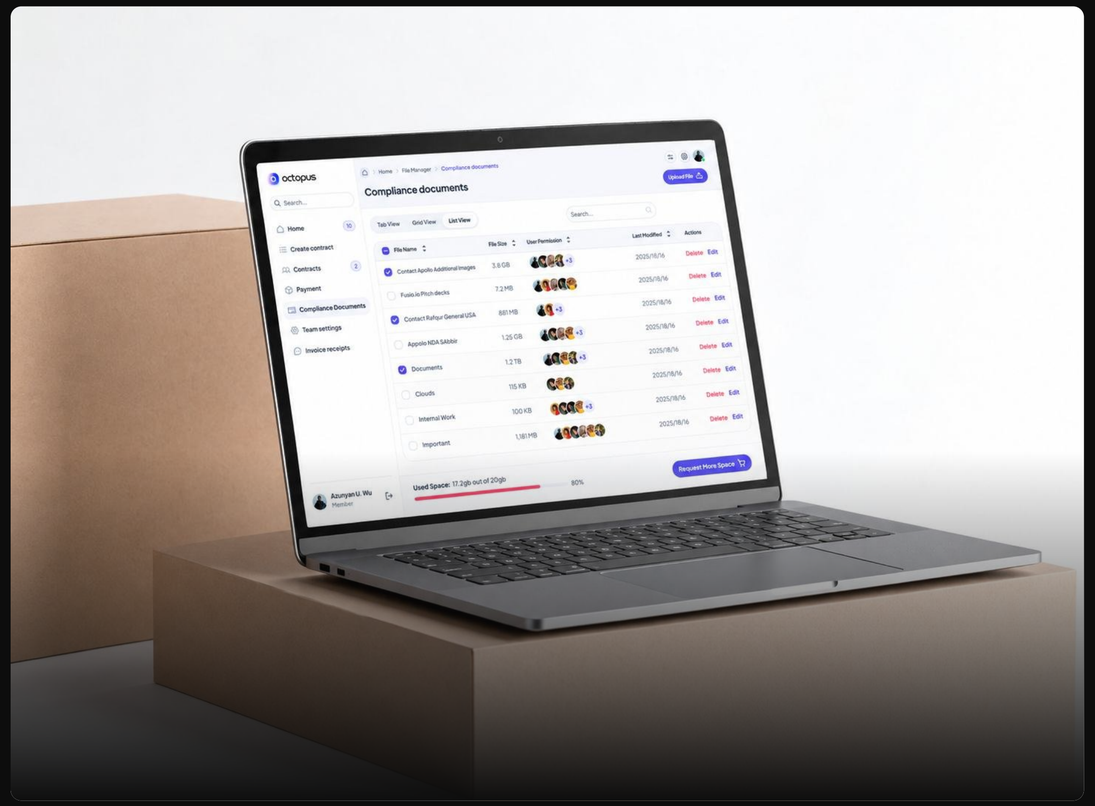

Outcomes

£400K+ saved annually
This digital transformation is estimated to save the organization more than £400,000 a year in document management costs.

Manual document generation eliminated
Automated document generation replaced hand-assembled letters, contracts, and brochures across five business lines.

Fraud prevention, in production
The cloud-based DMS is deployed and actively used in production, with scoped access preventing fraud and unauthorized document exposure.
