# Street Light Management

Philips asked Euristiq to turn its energy-efficient LED hue bulbs into a working product. Euristiq delivered an MVP of adaptive street light management software in two months — a Raspberry Pi backend and an operator mobile app for dimming, scheduling, recolouring, and monitoring lamp groups remotely.

Discovery | MVP | UX/UI design | Mobile | Digital twin | IoT | Real-time asset tracking | Data collection & processing

## Outcomes

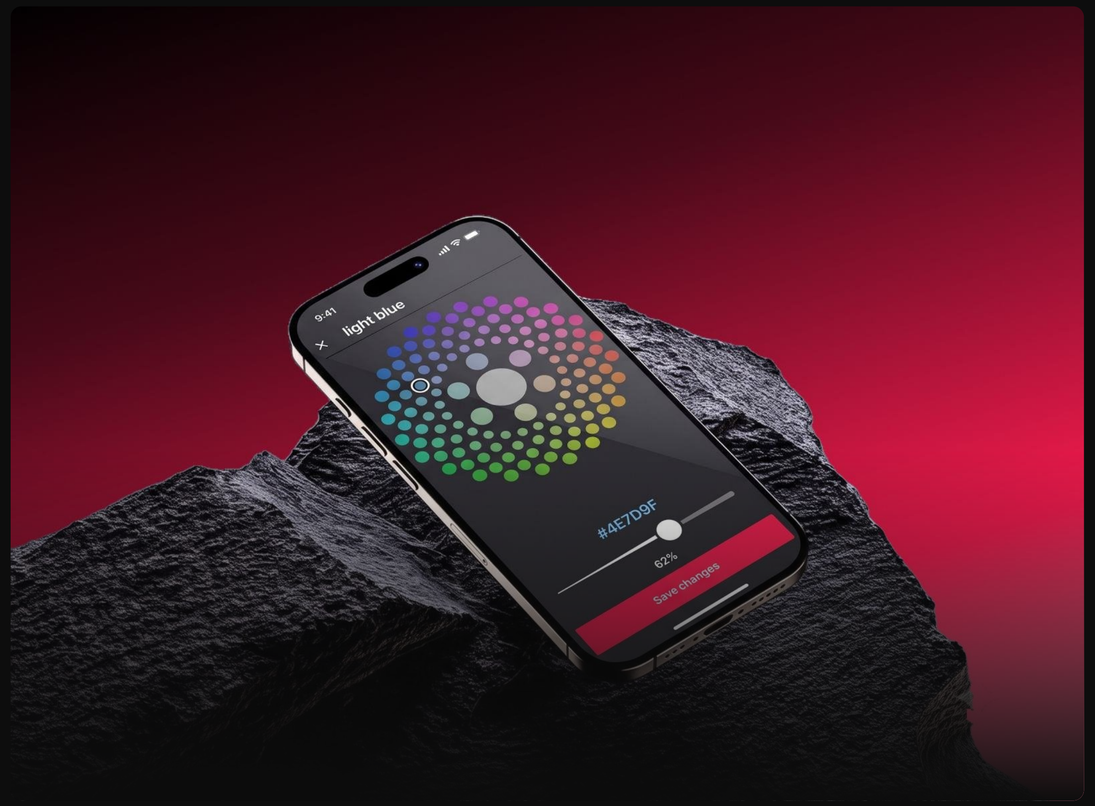

**MVP in 2 months**
A production-ready streetlight control MVP built for scalable deployment.

**50–70% energy savings**
LED plus smart scene management cuts city lighting energy use beyond a fixed-schedule baseline.

**24/7 failure detection**
Continuous background monitoring flags lamp-group outages automatically.

**Ready to scale citywide**
A locking mechanism and group-based API support expansion to new districts and events.
