The Flight Operating System Rolling Out Across the Ryanair Group

Euristiq's customer, one of Europe's largest airlines, required a flight operations software to enhance flight management. Given the high volume of daily flights, the solution needed to be scalable and highly reliable. Euristiq's engineers joined a large, globally distributed team spanning multiple countries to contribute to this complex system.

Flight ops software | Airline operations system | Crew scheduling | Flight scheduling | AWS | Custom software development

Outcomes

Group-wide rollout
The ROCS operational system is currently being implemented across the Ryanair Group — rolled out to Ryanair's subsidiary airlines.

Zero-disruption transition
The new system was deployed in parallel with the existing one, allowing airline staff to gradually adapt to the changes while minimizing disruption.

Spreadsheets retired
Tasks previously managed manually via Excel spreadsheets and repetitive data entry are automated within dedicated microservices.
