Urban Planning Software Development

Sitowise, a Finnish urban planning and infrastructure provider, relied on web applications for city planning, resource allocation, and real-time monitoring. The project focused on maintaining and enhancing these applications through better performance, stronger security, and an improved user experience.

Legacy modernization | Integration services | Data collection & processing

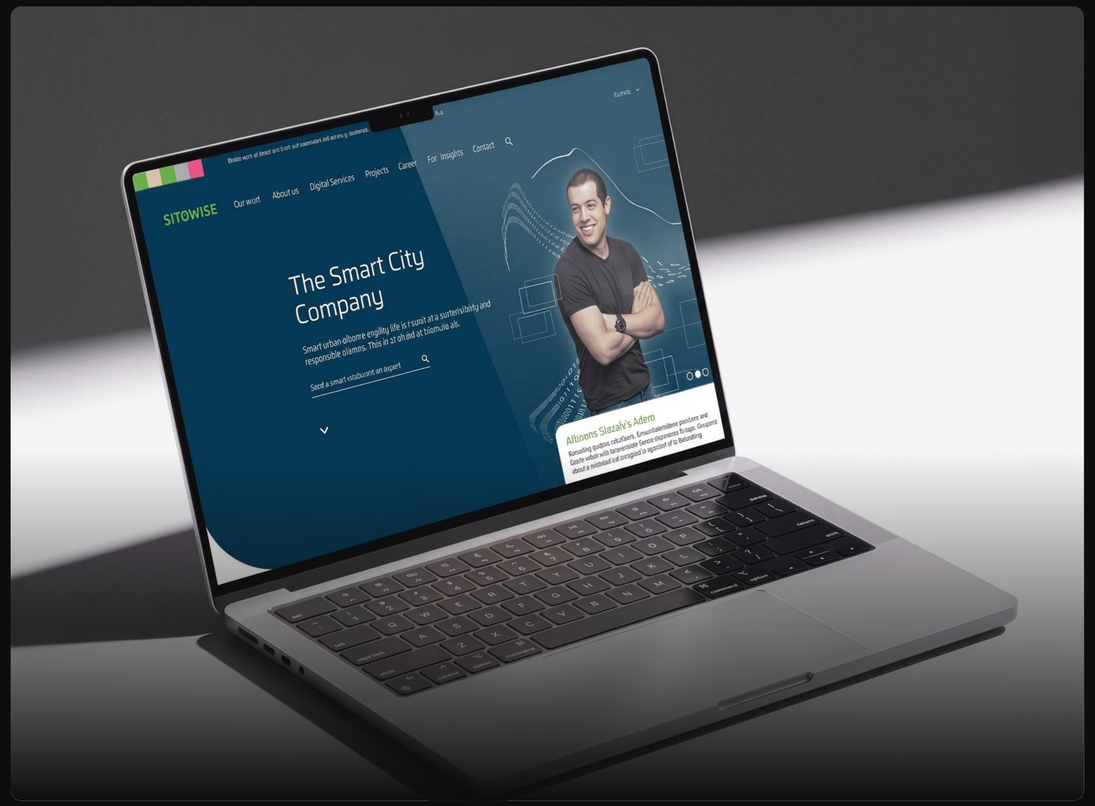

Outcomes

Dependency and platform standardization
Conducted extensive upgrades to align with the latest dependency and platform standards, mitigating vulnerabilities and ensuring compatibility with evolving technologies.

API integration
Integrated robust APIs to extend functionality, allowing seamless interaction with external systems and expanding the application's capabilities.

Frontend-backend data integration
Established seamless data flow between the frontend and backend systems, enabling real-time updates and enhanced user interactions.
