Smart Office IoT Solution

Tektelic, a Canadian provider of LoRaWAN™ IoT gateways and sensors, needed a partner to build the software layer that made its hardware useful. Euristiq built the full stack — from sensors to booking app to dashboard — shipping a production-ready release in six months.

Discovery | MVP | UI/UX design | IoT | Custom software development | Real time asset traking | Data collection & processing | Integration services

Outcomes

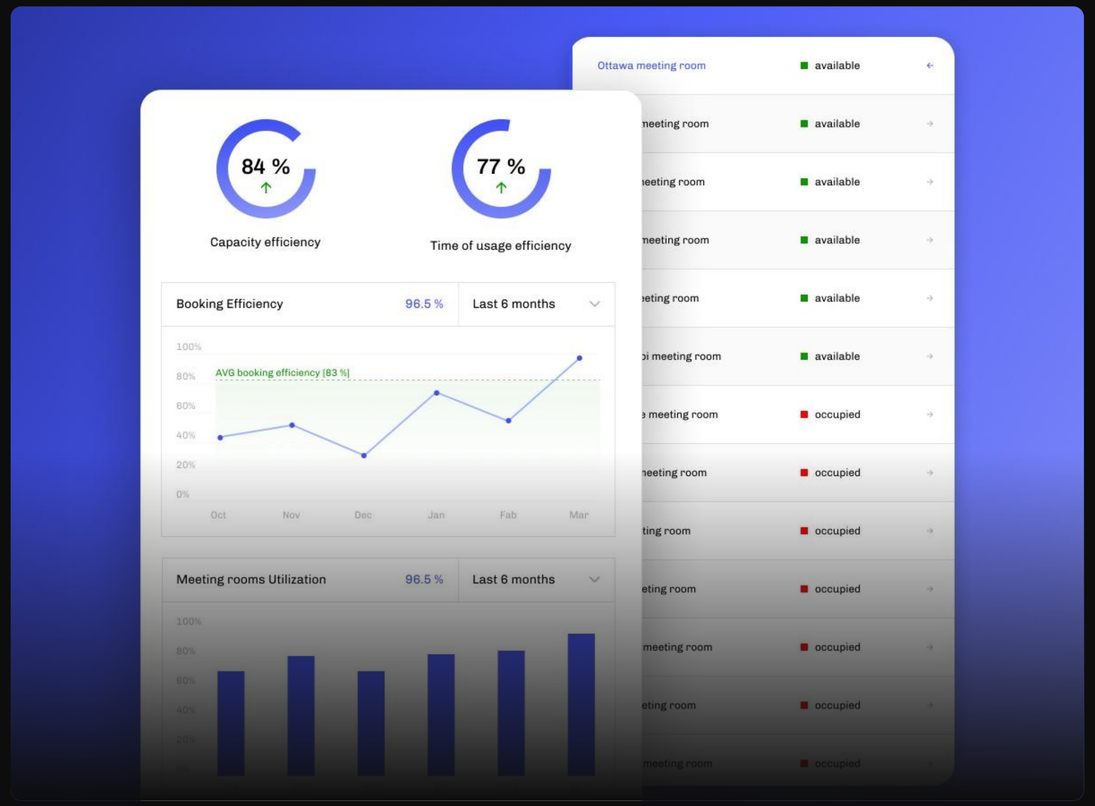

6 months, concept to production
A fully integrated smart office solution, from gateways and sensors to booking app and dashboard.

1 reusable core codebase
Built for Tektelic's future device integrations, not a one-off build.

100% of booking flow in production
Meeting room booking displays and app now in live volume production.

Dual-sensor occupancy detection
One PIR sensor plus a chair-mounted motion sensor per room for accurate room status.
