Construction Budgeting Software

A US startup partnered with Euristiq to build a cloud-based construction budgeting platform. The subscription-based web app centralizes budget planning, cost tracking, and forecasting, helping users understand how decisions impact final project costs.

Discovery | MVP | UX/UI design | AWS | Custom software development

Outcomes

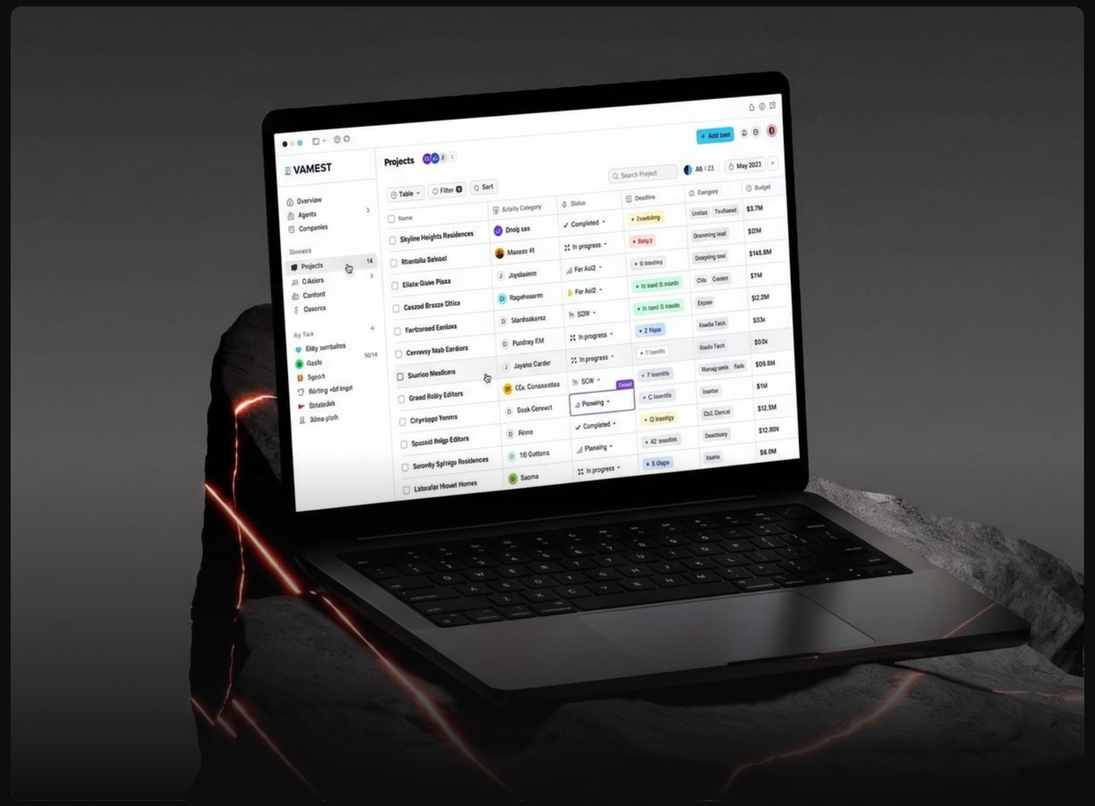

Streamlined budgeting and risk mitigation
We successfully developed a system that streamlines the construction budgeting process and enables timely decision-making based on real-time project performance.

Backend and frontend built from the ground up
Our team carefully selected the technology stack, designed, and built the solution from the ground up, maintaining regular discussions with the client to ensure optimal implementation.

Market-ready in 4 months
After four months of development, the Euristiq team introduced a new product tailored to construction companies, now available for public use on a subscription-based model.

Budget Planning Tool
Integrated payment system, dynamic dashboards and budget predictions. Secure, user friendly.
