Student Information System Modernization

YORK U

York University's Student Information System had grown over 30 years into 60+ modules built on outdated, disconnected technologies that staff were wary of changing. Euristiq ran a 4-week Discovery that mapped a phased modernization path with no disruption to registration, enrollment, or academic operations.

Discovery | Architecture engineering | Accessibility & compliance | Legacy modernization

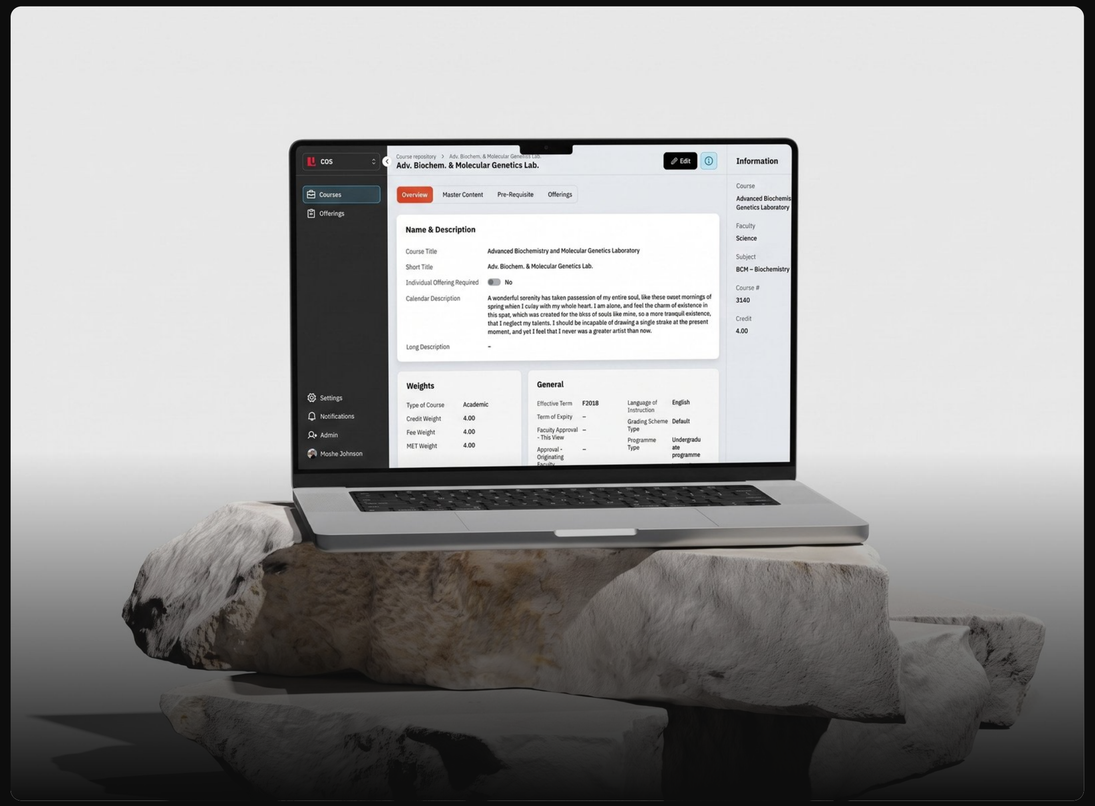

Outcomes

Zero-disruption migration path
A phased roadmap across 60+ modules with no interruption to academic operations.

60+ modules mapped
Across 30 years of legacy system evolution, serving students daily.

Modern stack recommended
A containerized backend, micro-frontends, and a React/Java stack to cut technical debt.

Accessibility-first UX
A unified web platform design with a full accessibility assessment built in.
