Business Travel Management Application

euristiq + Finch

Discovery | Web development | UI/UX design | Front-end/back-end development | Architecture | SaaS deployment | Integration services | Micro-Services

The customer, a startup from Ireland, required software to handle corporate group travel by offering collaborative planning, multiple user bookings, efficient expense tracking, and an AI assistant to streamline trip building.

We helped develop a B2B software product that simplifies work-related travel, ensuring seamless access for all users while maintaining robust data security.

TECHNOLOGY STACK

AWS | OpenAI | Node.js / Nest.js | SQL | HTML/CSS/Material | TypeScript/Angular | Google Maps | Angular | Docker

OUTCOMES

- Cloud-based architecture on AWS for improved scalability and performance
- Microservices-based backend enabling flexibility and seamless updates
- New UX/UI design enhancing user experience and engagement
- Third-party integrations with airlines, hotels, and payment providers
- Automated CI/CD pipeline ensuring faster and more reliable deployments
- Advanced data analytics for expense tracking and travel insights
