Online Identity Verification Service. Midy by Norton

euristiq + norton

Web development | Mobile app development | DevOps | QA/QC testing | Cybersecurity & data protection | Integration services

Collaborated with a leading identity and authentication provider to develop digital product that simplifies consumer access to online services and applications.

Key requirements included integrating online biometrics and document-checking technology with real-time authentication systems, as well as ensuring encryption of all stored information.

TECHNOLOGY STACK

ASP.NET MVC | Azure | Azure SQL | MongoDB | Kubernetes | Event Hubs | RabbitMQ | SignalR | Angular.js | StructureMap | HTML/CSS/JavaScript

AWS SERVICES

Document DB | Amazon RDS | Elastic Kubernetes Service (EKS) | Key Management Service (KMS)

OUTCOMES

- Delivered an identity verification application with real-time data processing capabilities
- Integration with biometrics and document-checking technology, credential and authorisation services
- Integration with real-time authentication and verification technologies offered by the client
- Enhanced user experience by enabling swift and secure verification processes
- DevOps services based on AWS
