KYC Verification Service
Onfido Integration

euristiq + ENTRUST

Web development | API Integration | Mobile SDK | Architecture | QA/QC testing

We integrated Onfido (now Entrust) into a client's digital identity platform — delivering real-time KYC compliance, zero downtime, and a fully branded verification experience across web and mobile.

Document submission, OCR extraction, and result processing all happen automatically, with no redirects for the end user.

TECHNOLOGY STACK

Java | Golang | Onfido Web SDK | Onfido Mobile SDK (iOS / Android) | Webhooks | REST API

OUTCOMES

- Seamless Onfido (Entrust) integration with zero downtime
- Support for 2,500+ document types across multiple jurisdictions
- Decisioning engine covering data validation, visual authenticity, and image integrity checks
- Event-driven webhook architecture — no polling delays
- Advanced fraud detection via custom breakdown logic and repeat-attempt blocking
- Native identity verification via Mobile SDK for iOS and Android
