Marketplace for Telco. Legacy Modernization. New UX/UI.

euristiq + KLOUDVILLE

UX/UI design | Web development | Architecture | Business Analysis | CRM integration | QA/QC testing

Enhanced a B2B marketplace for Indonesia's second-largest telecom provider, improving UX/UI and frontend performance. Integrated with the existing API, modernized the interface, and optimized system responsiveness.

Developed new features, including CRM integration, subscription management, and bulk ordering, while boosting platform performance by 3x. Scaled the solution to support over 4 million new users.

TECHNOLOGY STACK

Multi-language | HTML/CSS/JavaScript | Angular | NgRx | RxJs | Jest | Ramda | Bulma

OUTCOMES

- Delivered uninterrupted service to a telecom provider's 102.2 million subscribers during the transition
- Modernised the B2B and B2C user service platform with a new UI/UX and simplified user flows
- 3x improved overall platform performance with 5x faster page loading speed
- Seamless API integration ensuring zero functionality loss
- Integrated existing system components with the new platform without causing service disruptions
