Altimeter Apps for iOS & Android. JumpTrack by L&B

euristiq + ALTIMETERS

Mobile development | UI/UX design | IoT | Architecture | Integration services

The client is a Danish company, “L&B Altimeters”, that produces the most accurate and high-quality altimeters for skydivers. They turned to Euristiq for an IoT solution to accompany their hardware electronic devices.

We developed a “JumpTrack App”, an IoT altimeter apps for Android and iOS that give skydivers a wholesome experience of using the altimeters.

TECHNOLOGY STACK

Android | iOS | BLE/UART | Room DB | Google (Places, Maps, Location) | Serverless GraphQL API)

AWS SERVICES

Amplify | API (GraphQL) | Dynamo DB | Cognito | S3 | Pinpoint | Lambda

OUTCOMES

- BLE integration with altimeter hardware for real-time configuration and data transfer
- Offline-first architecture with AWS Amplify enabling seamless data sync to the cloud
- Multi-device support and remote customization of skydiving altimeter settings via mobile apps
- Jump data analytics and visualization with personalized dashboards and digital logbooks
