Mobile App for Remote Device Management. Lumintell

euristiq + NOVALUME

Mobile development | UX/UI design | IoT | Architecture | QA/QC testing | SaaS deployment | Integration services

A Danish company Novalume that develops and manufactures advanced energy-efficient lighting solutions requested an IoT mobile application development from Euristiq for device management to help with field service of lighting assets – task management and new device installation.

The Euristiq team developed a fully working Android app as part of a complex solution in 6 months. The app is designed to help field workers with easier management of street nodes.

TECHNOLOGY STACK

Android SDK | Dagger 2 | RxJava | Retrofit | NFC | Event Hubs | Camera API | Firebase Cloud Messaging | Firebase ML Kit | Google Places | Google Maps

OUTCOMES

- Android IoT management app for field service operations
- Seamless integration with smart city infrastructure
- Task management features to optimize workflows
- Support for new device installations in lighting networks
- Real-time data visualization for instant insights
