Web Application. Remote Asset Monitoring by NPE

euristiq + NORTH POLE ENGINEERING

Discovery | Web development | Architecture | Integration services | Front-end/back-end | QA testing

The client is an IoT product and engineering services company, specializing in providing sensor-based technology for a wide range of markets. The client came to us with an idea to create an innovative fitness business software aimed at remotely managing sports equipment efficiency. Starting with Discovery, we designed and developed an NPE Fitness Cloud: an AWS-based platform that monitors and manages fitness equipment in real-time.

TECHNOLOGY STACK

Java | Hibernate | Spring Framework | DDD | CQRS | MQTT | Angular

AWS SERVICES

AWS Fargate | Amazon RDS | AWS CodePipeline / CodeBuild / CodeDeploy | AWS CloudFront | AWS CloudFormation | AWS IoT | AWS DynamoDB

OUTCOMES

- Discovery service resulting in 50% development time and cost reduced
- Scalable platform that can handle 10k users and 100k devices that send data every minute
- Advanced data analytics for fitness businesses that deliver actionable insights for fitness studios, clubs, and gym owners
