Custom IoT Platform. Remote Device Management by NPE

euristiq + NORTH POLE ENGINEERING

Discovery | UI/UX design | Web development | Architecture | SaaS deployment | DevOps | QA testing

The client is an IoT product and engineering services company, specializing in providing sensor-based technology for a wide range of markets. The client came to us with an idea of a custom IoT platform that would be an intermediate layer between the devices and customers. Starting with Discovery, we determined the exact requirements and features of the solution, prepared a Software Requirements Specification and then created a custom IoT device management platform.

TECHNOLOGY STACK

Java | Hibernate | Spring Framework | DDD | CQRS | MQTT | Angular

AWS SERVICES

AWS Fargate | Amazon RDS | AWS CodePipeline / CodeBuild / CodeDeploy | AWS CloudFront | AWS CloudFormation | AWS IoT

OUTCOMES

- Business analytics and requirements elicitation
- UX/UI and architecture design
- AWS-powered IoT platform development
- Data gathering and analytics
- Public API for third-party applications integration
